RE: BioPetroClean petroleum wastewater treatment

Dear Sir or Madam,

My name is Ronnie Muruven and I am the Terminal Site Manager for SAPREF, a joint venture between Shell SA Refining and BP Southern Africa. SAPREF operates South Africa's largest crude oil refinery as well as an oil terminal.

In 2008, we conducted our first project for wastewater treatment with BioPetroClean. SAPREF had accumulated a large quantity of wastewater that we were unable to effectively treat with our existing water treatment infrastructure. After considering several alternatives, we selected BioPetroClean because they offered a competitively priced, one-time service option and showed their ability in advance to effectively treat the water to meet regulatory standards.

In 2008, BPC successfully treated 5,000 cubic meters of highly contaminated wastewater from our oil terminal facility. BPC was able to treat the water on-site using their technology in a modular fashion, turning the storage tank holding the contaminated water into a reactor for the bioremediation process.

We were impressed with the outcome of this one-time service as well as the professional demeanor of BPC's personnel that we looked to BPC again in 2009 for treatment of additional, accumulated wastewater. I highly recommend BPC since they offered an affordable solution with performance guarantees for petroleum wastewater treatment.

Sincerely,

Ronnie Muruven
Island View Manager
