RE: BioPetroClean bilge water treatment solutions

To Whom It May Concern:

My name is Martin Stouten and I am the wastewater treatment Manager for Heros Sluiskil. Heros Groep ("Heros") operates in the field of waste and building materials processing, water treatment and port operations and also leases mobile cranes.

Heros has operated an activated sludge treatment unit for a number of years. However, we looked for a solution to deal with wastewater with high levels of phenols, oil and other organic contaminants as well as water with high salinity. We completed a pilot study of BioPetroClean's wastewater treatment technology in 2009. After the system operated for a period of 3 months with positive results, we decided to move forward with the installation of a permanent system.

BioPetroClean completed the implementation of the permanent system in May 2010 to deal with low-flow sidestreams of highly contaminated water. This will allow us to reduce the sludge levels on our activated sludge system.

I am happy to vouch for BioPetroClean as a provider of effective solutions for wastewater treatment.

Respectfully yours,

Martin Stouten

Plant Manager, Heros Sluiskil
